

LOADING PIANO BEATS IN PSR E KEYBOARD

REQ- This are the things to make sure you have before we begin the process

- psr e piano which is usb enabled
- Usb Flash disk
- Beats (in STY or PSR format)

Now make sure you place your beats in your flash disk and don't put them in any folder, in fact delete everything in flash disk including folders before you put beats inside.

WHY- Psr E series piano doesn't have that capability of reading through folders, it is only able to read its compatible files inside flash disk, so place the beats in empty flash disk.

Step 1 - Pluck the usb flash drive in your piano and wait for 3 to 4 seconds

until you see the word on a screen
USB has stopped blinking.

Step 2 - On your piano buttons , longpress
(press and hold) **FUNCTION** button
Until you see **LOAD STY** on the screen.

Step 3 - press 0 (zero) button, in this case 0
is like OKAY , So when you press
okay you will be able to view the
sty beats you saved in your flash disk

Step 4 - Turn the black wheel on your piano
(the wheel that udjusts tempo and
volume) turn it until you reach to the
beat you want to load in your piano.

Step 5 - Hope you have reached on that beat,
Press ok (0 button) then it will ask
you in which given space you will
Load it, select your preferable space
By turning the wheel of adjustment
Then press 0 if you have reached
At your space of choice.

Step 6 - after doing the Step 5 process, It will ask you something like LOAD? just press 0 button to accept

Loading...Loading...

After few seconds to 1 minute

Complete

Now go back to the styles and play your newly loaded style .
